

LOUBAKI BLAISE YANICK

AI ENGINEER • MLOPS & FULL-STACK DEVELOPER • ROBOTICS SPECIALIST

[+242 040130670] • [blaiseyanickloubaki@gmail.com] • [pointe-noire, republic of congo] • [github.com/blaiseyanickloubaki-collab]

PROFESSIONAL SUMMARY

Versatile and highly skilled Software Engineer and AI Specialist with extensive expertise spanning Machine Learning, Deep Learning, Computer Vision, MLOps, and Full-Stack Development. Proven capability in architecting intelligent end-to-end applications, training robust models, containerizing solutions with Docker, and building embedded robotic systems.

CORE TECHNICAL SKILLS & STACK

Programming Languages: Python (Advanced: OOP, Async, Decorators, Data Structures), C++ (Essential bases), Dart, JavaScript/TypeScript, PHP.

Machine Learning & Deep Learning: Scikit-Learn (Pipelines, Preprocessing, Ensemble Methods, Cross-Validation), TensorFlow, Keras, CNNs, Transfer Learning, Fine-Tuning, RNNs, LSTMs, NLP, Transformers (Attention Is All You Need).

Computer Vision & Generative AI: OpenCV (Full tutorial), YOLOv8, MediaPipe, Autoencoders, VAEs, GANs, LangChain, Hugging Face, OpenAI APIs, RAG Architectures, Vector Databases.

MLOps, DevOps & Cloud: Git, GitHub CI/CD, Linux (Ubuntu), Docker, DVC, MLflow, AWS, Google Cloud, Azure, Streamlit Web App Deployment, Telegram Bot Integration.

PROFESSIONAL PROJECTS & EXPERIENCE

Lead AI & MLOps Engineer — [Academic Project]

2024 – Present

- Developed automated machine learning pipelines (Data Ingestion, Preprocessing, and Model Tracking with MLflow & DVC).
- Built and containerized intelligent Streamlit web apps and automated Auto-ML platforms using Docker.
- Integrated cutting-edge Large Language Model (LLM) workflows utilizing Hugging Face, LangChain, and RAG architectures.

Computer Vision & Robotics Developer — [Academic Project]

2023 – 2024

- Implemented real-time object detection systems using YOLOv8, OpenCV, and MediaPipe deployed on Raspberry Pi and Jetson platforms.
- Engineered autonomous drone navigation scripts using Python with DJI Tello and PySimVerse environments.
- Configured ROS 2 nodes for hardware communication combining analog/digital electronics with Arduino and C++.

PROFESSIONAL EXPERIENCE (CONTINUED)

- Full-Stack & Mobile App Developer — [Academic Project]2022 – 2023
- Designed modern, scalable web platforms using React, Next.js, Django, Flask, FastAPI, and Django REST Framework.
 - Developed cross-platform mobile applications utilizing Dart, Flutter, and React Native.
 - Managed diverse relational and non-relational database systems including MySQL, SQLite, PostgreSQL, and MongoDB.

ADDITIONAL TECHNOLOGIES & TOOLS

Data Science Python Stack: NumPy, Matplotlib, SciPy, Pandas, Seaborn.

Mobile Development: Dart (Complete fundamentals), Flutter, React Native.

Web Frameworks & Backends: Django, Django REST Framework, Flask, FastAPI, PHP, Next.js, React.js, HTML5, CSS3.

Robotics & Hardware: ROS 2, Arduino, Raspberry Pi, NVIDIA Jetson, C++ (Embedded), Drone Programming (DJI Tello, PySimVerse).

Office & Management Tools: Microsoft Excel (Macros & VBA), Word, PowerPoint (Basics), Publisher (Basics), Microsoft Project (Basics).

EDUCATION & SPECIALIZED TRAINING

- Advanced Machine Learning & Deep Learning Curriculum — [Academic Project]2023 – 2024
- Completed intensive training in Supervised/Unsupervised Learning, Neural Network backpropagation from scratch with NumPy, CNNs, Transfer Learning, and Fine-Tuning.
 - Explored foundational GenAI mechanisms including Autoencoders, VAEs, GANs, and Transformers.
- Robotics & Advanced Computer Vision Bootcamp — [Academic Project]2022 – 2023
- Mastered hardware-software integration across embedded systems, camera pipelines, and autonomous drone control algorithms.
